DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 7/2/2007 has been entered.

The prior art rejection over GB 666 is withdrawn since this patent fails to teach or suggest the requirement of substituting at least one halogen atom of a fluorinated compound with at least one hydrogen to form a hydrofluorinated compound.

The following are new grounds of rejection:

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 93-100 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 5,659,093 to Takubo et al. (Takubo).

Takubo teaches hydrogenation of pentafluoro-dichloropropane to pentafluoropropane with palladium, see columns 2 and 3.

Takubo fails to explicitly teach the presence of water. However, Takubo does not teach anhydrous conditions, therefore those of ordinary skill would expect that the air present in the reaction would contain at least some portion of water. Therefore, the requirement that water be present is invariably a part of the process disclosed in Takubo, and thus prima facie obvious.

Claims 101-104 are rejected under 35 U.S.C. 103(a) as being unpatentable over Takubo in view of "Hydrofluorocarbons" in Kirk-Othmer Encyclopedia of Chemical Technology, pp. 714-729, Copyright © 2001 by John Wiley & Sons, Inc., of record (Kirk-Othmer).

Takubo fails to explicitly teach the specific reaction set forth in claim 89. However, those of ordinary skill would have been motivated to modify the disclosure of Takubo to include the specific reagent in order to provide the desired compound, such as 1,1,1,2,3,4,4,5,5,5-Decafluoropentane (see reaction of olefinic compound (reaction 18) p.724 of Kirk-Othmer), or a solvent such as heptafluoropropane (see page 726 of Kirk-Othmer). Therefore, Takubo and Kirk Othmer render the rejected claims prima facie obvious since these references teach or suggest the elements of the rejected claims with a reasonable expectation of success.
